

# End-User Instructions for Two-Dimensional Black-Scholes model Option Pricer

It prices options!  
Luke Armitage

This software

describe what the program does.  
brief description of methods used in software.

## 1 Running the software

Unzip the folder [folder name].zip into literally wherever.

specify how to open and run software

## 2 Calibrating the model

To calibrate the model, replace the file `data.csv`, found in the main directory, with your historical stock prices in `.csv` file format. Upon running the program, you will be prompted to specify a time interval, which is the period between recorded historical stock prices.

The error message “Error opening file. Closing program.” means that the program could not find the file `data.csv`. Please ensure the historical stock data is in the correct file format and saved in the correct directory.
